

Programming 1 – Quiz (Lab 1)

Student Name: _____

Student ID: _____

Course Code: _____

Date: _____

Instructions:

- Answer both questions.
- Use the C++ compiler to implement your solutions.
- Show both your code and the program output.
- Each question is worth 10 points.
- Write your name, ID, course code, and date in the fields above.

Q1. Write a C++ program that asks the user to enter three numbers, then calculates and displays their average. (10 points)

Q2. Write a C++ program that asks the user to enter their name, age, and whether they are a student (true/false). The program should then display a message like:

 Hello Sara, you are 21 years old. Student: true

(10 points)

Total: 20 points
